

1st joint conference of the Interdisciplinary Young Investigators (IYI) Group on Alzheimer's & Dementia and the German Center for Neurodegenerative Diseases (DZNE): RG Psychosocial Epidemiology and Public Health

16 November 2020

Digital - Free of charge - Certificate of attendance/participation

“Fostering interdisciplinary research on dementia”

“Combining perspectives to unravel dementia’s entangled issues”

The vision is to pave the way to a **holistic approach to dementia prevention and care**. Within the conference, we will have the chance to address interconnected issues at the interface of several disciplines and to **integrate different perspectives**, including the pathological markers in the brain and in cognition, the social and economic circumstances as well as therapeutic interventions and caregiving. The aim is to **foster the development of highly successful interdisciplinary science and professionals**.

- International and explicitly interdisciplinary
- Virtual conference with live session and chat opportunities
- Access via link provided to registered participants
- Digital conference brochure with the program, the abstracts, and information about all the speakers.

Register

Send an email with name, position, affiliation to PsychEpi@dzne.de

Call for abstracts

We invite authors to submit abstracts for oral presentations to be delivered digitally. Abstracts will be reviewed on a rolling basis, ending on October 01, 2020. To submit an abstract, send an email with name, position, affiliation and the abstract to PsychEpi@dzne.de

About the Interdisciplinary Young Investigators (IYI) Group on Alzheimer's & Dementia

The IYI is a group of young investigators from different parts of the world. Each investigator works in a different research field, but all investigators do research on dementia. The aim of our group is to combine interdisciplinary perspectives and to encourage transdisciplinary thinking in order to pave the way to a holistic approach to dementia prevention and care so that more health practitioners can carry out integrated person-centered dementia prevention and care practices. About the German Center for Neurodegenerative Diseases (DZNE): RG Psychosocial Epidemiology & Public Health

The DZNE multi-site research center in Germany that is dedicated to research on neurodegenerative diseases in all their facets. It pursues an interdisciplinary research strategy that concentrates expertise in four interconnected areas: Fundamental research, clinical research, health care research, and population research. DZNE experts cooperate across sites and disciplines to promote translation of research findings into practical application. The RG Psychosocial Epidemiology and public Health at the DZNE aims at identifying psychosocial determinants and risk factors in the population that either increase or decrease the risk for developing dementia, the prevalence rate, and the disease burden.
