

# Collaboration with industry and economy

## Information for partners

### Introduction

The DZNE is a non-profit research institution funded by the German federal and state governments. It is in the public interest to ensure that innovation contributes to improvement of public health. To achieve this goal, DZNE supports the transfer of technology and knowledge to industry and society.

### Principles of collaboration

- The purpose of DZNE is to operate in science and research, mainly in the field of neurodegenerative diseases. Collaboration is therefore aiming particularly at improving (a) the understanding of cause of disease and prevention, (b) early detection, (c) therapy and (d) long-term care.
- The DZNE concludes collaboration agreements under the law of the Federal Republic of Germany.
- Services, which can be provided also by the private sector, are offered at market prices.
- Contracts are only valid if signed by the DZNE board or an authorized DZNE signatory. The individual DZNE sites are not legally independent.
- The Technology Transfer Office is the first point of contact for potential partners from industry and contact for all subsequent contract negotiations.
